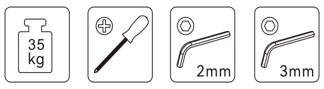
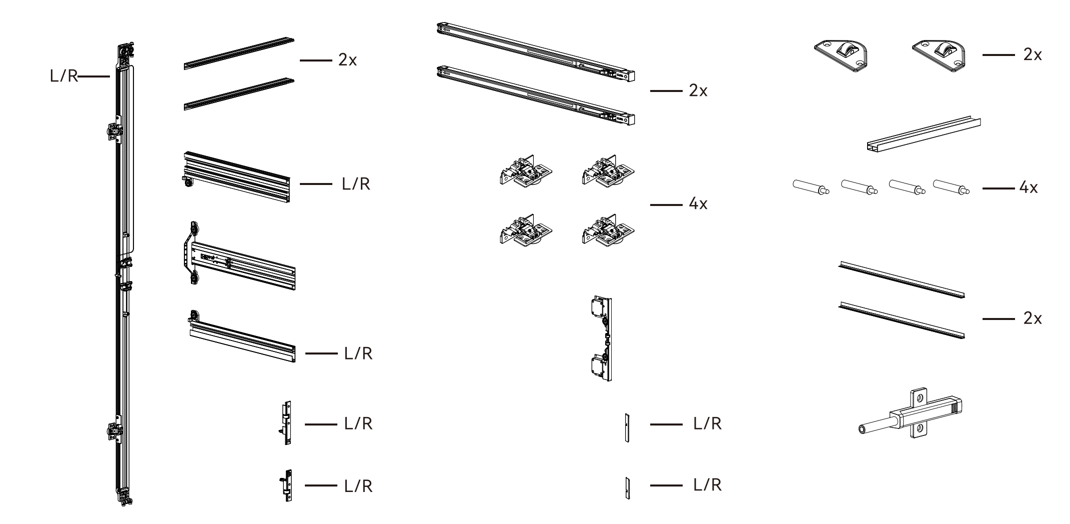
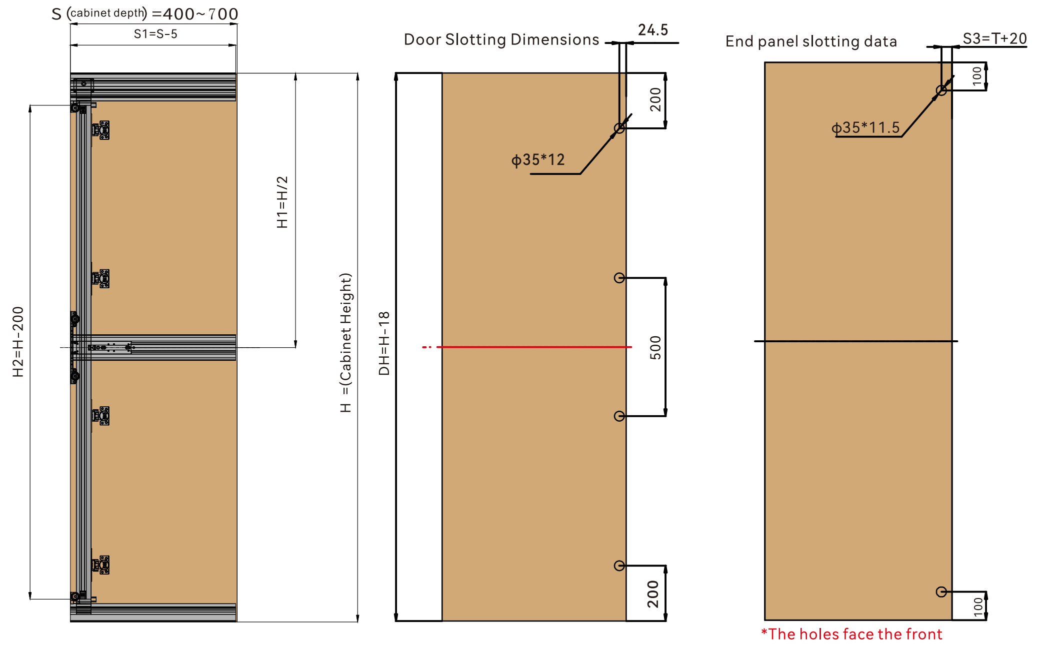
TUTTI

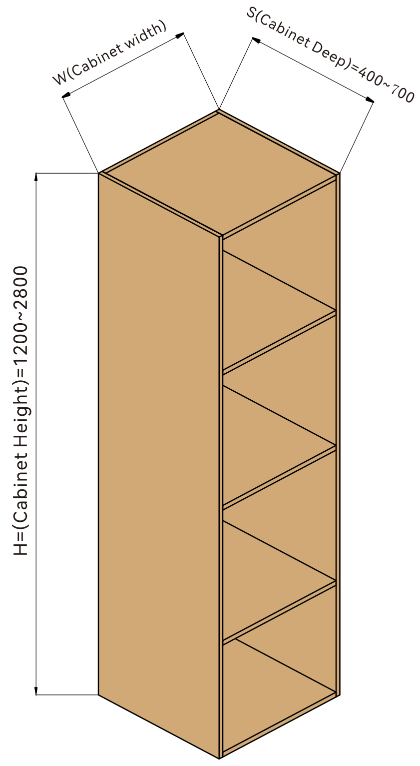
T926 Push To Open Slide-in Door system installation Instruction



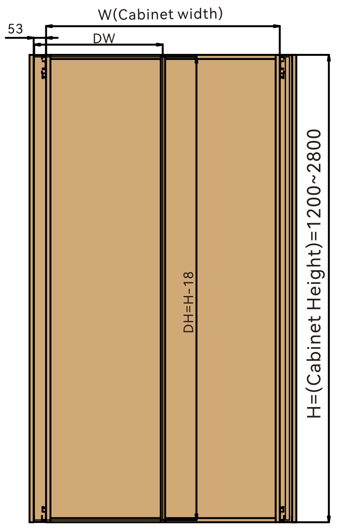




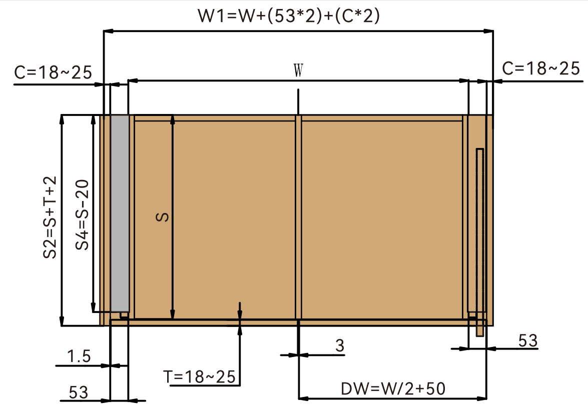
1 Installation parameter



Abbr	Description	Abbr	Description
W	Cabinet width	H1	Middle rail position
W1	Cabinet width with end panel width	H2	vertical rail cutting Height
S	Cabinet depth	DW	Door width
S1	Middle rail Width	DS	The width of the door panel when the door panel is flush with the side panel
S2	End panel Width	DH	Door Height
S3	Pre-drilled hole distance of the side guiding wheel	C	End panel thickness
S4	Side guide connector aluminum width	T	Door thickness
H	Cabinet Height		

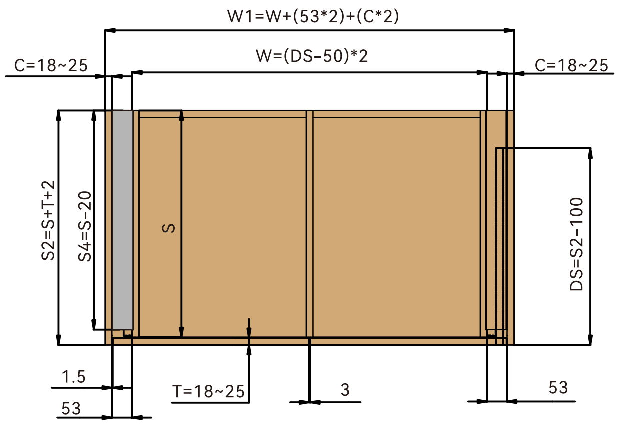


Door panel
flush side panel



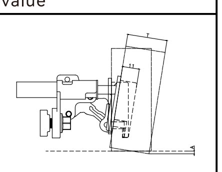
Door panel
flush side panel

Door panel is 100 mm
less than cabinet depth

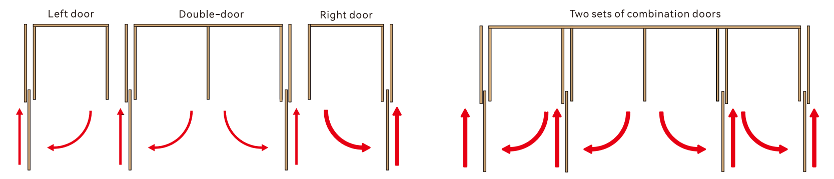


opening clearance value

		T=18	T=19	T=20	T=21	T=22	T=23	T=24	T=25
A	K=4	0	0	0	0.1	0.2	0.3	0.3	0.4
	K=5	0	0	0	0	0.1	0.2	0.2	0.3
	K=6	0	0	0	0	0.1	0.2	0.2	0.3
	K=7	0	0	0	0	0.1	0.2	0.2	0.3
	K=8	0	0	0	0	0.1	0.2	0.2	0.3

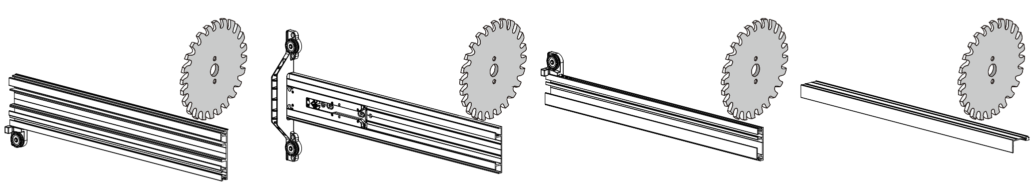


Note: When facing the cabinet, a door that opens to the left is considered a left-opening door, and a door that opens to the right is a right-opening door.

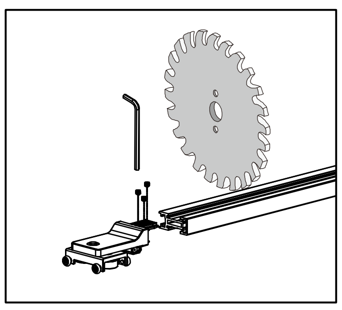


2 Cutting rail

2.1Cut the top, middle and bottom rails as well as the side cover plates according to the depth of the cabinet. Reference S1



2.2Cut the vertical rail according to the height of the cabinet. Reference H2

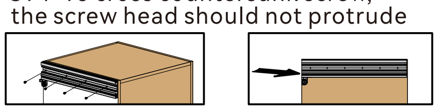


Loosen one side of the pulley assembly with a 3mm Allen wrench, cut the aluminum, cut the pulley assembly back into position and lock it.

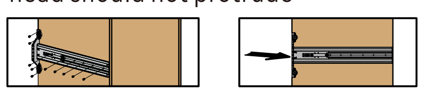
Note:Clean the inside of the rail after cutting the aluminum to prevent Dust from affecting the product experience

3 Installation procedure

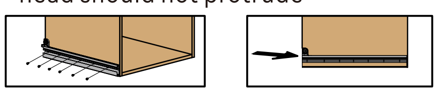
3.1The Upper rail Assembly is fixed by ST4*16 cross countersunk screw, the screw head should not protrude



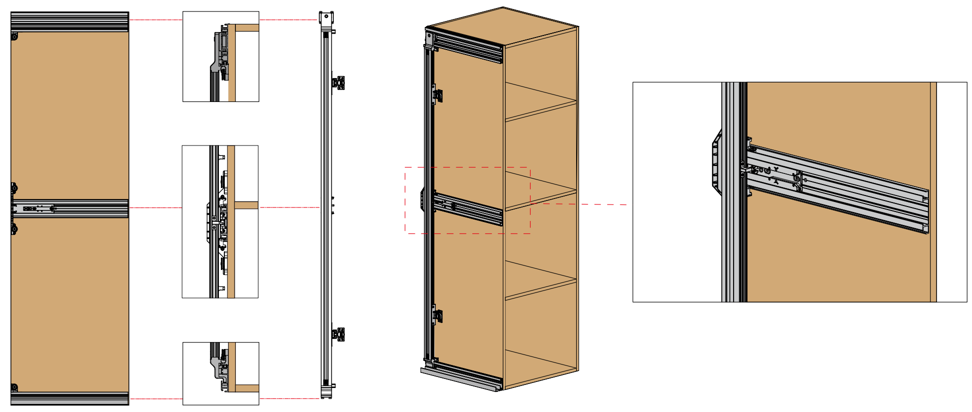
3.2 The Middle rail Assembly is fixed by ST4*16 cross countersunk screw, the screw head should not protrude



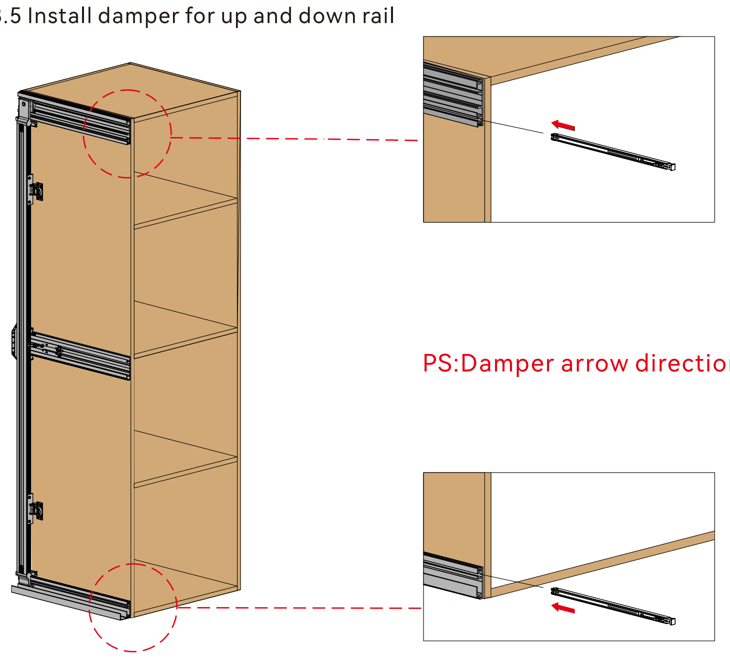
3.3 The Down rail Assembly is fixed by ST4*16 cross countersunk screw, the screw head should not protrude



3.4 Align the Profile handle Assembly section with the rail, push the Profile handle Assembly to the bottom of the Middle rail press and then lock it

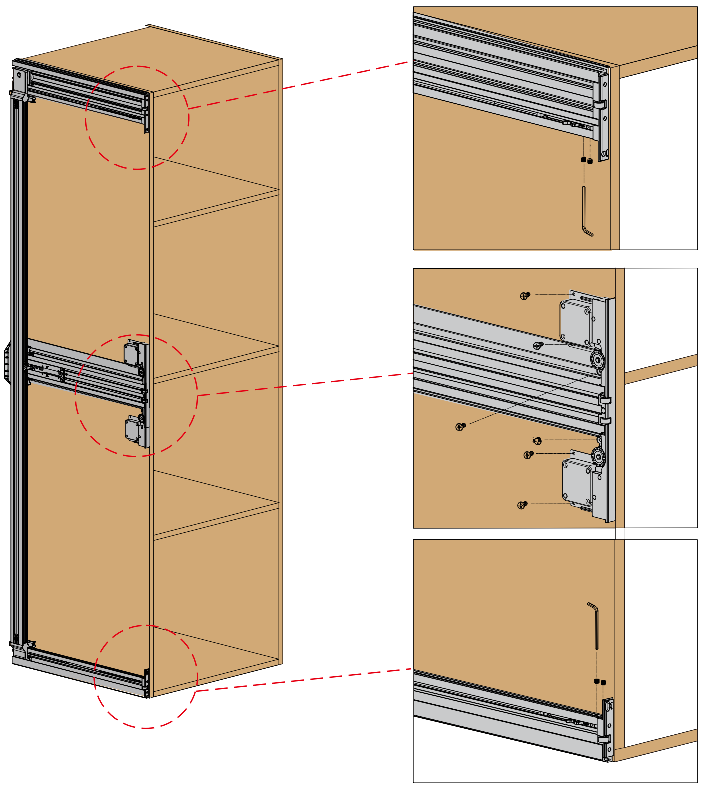


3.5 Install damper for up and down rail



PS:Damper arrow direction

3.6 Install upper/down/middle rail guide wheel seat

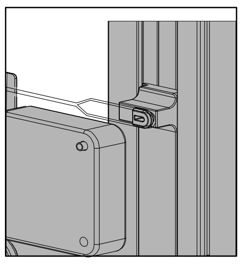


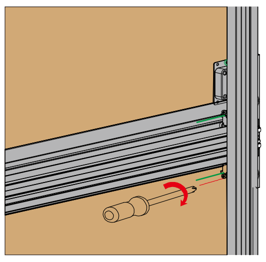
Use a 3mm hex wrench to lock the hex tightening screws

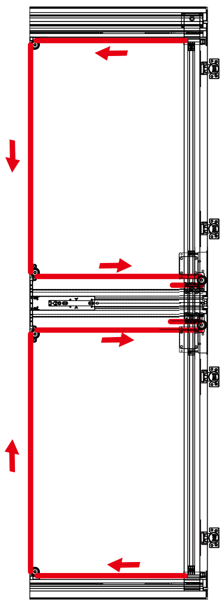
Fixed by ST4*16 cross countersunk screws

Use a 3mm hex wrench to lock the hex tightening screws

4 Install wire Assembly and Fixed damper



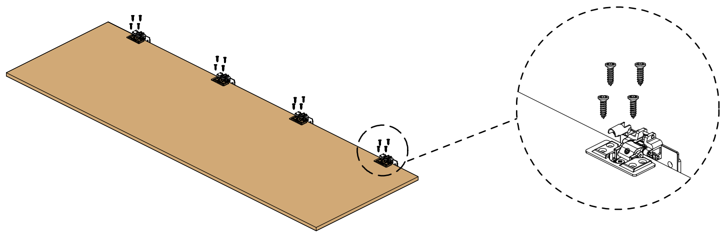




4.1Hang the wire of the middle rail guide wheel seat to the Profile handle Assembly pendant

4.2Pass the wire through the wheel to the end point in sequence, tighten the tension with screws, and cut off the excess steel wire

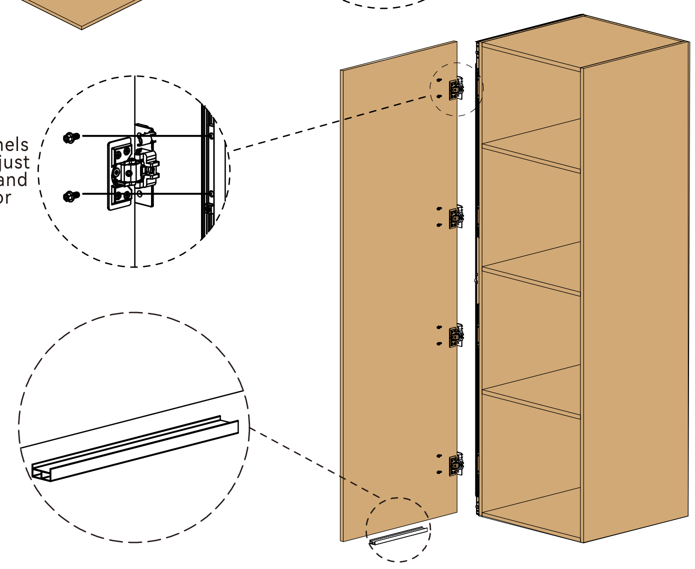
5 Install Door panel



5.1 Attach hinges to door panels

5.3 Attach hinges to door panels Use the ratchet wrench to adjust the height of the door panel and match the position of the door panel holes

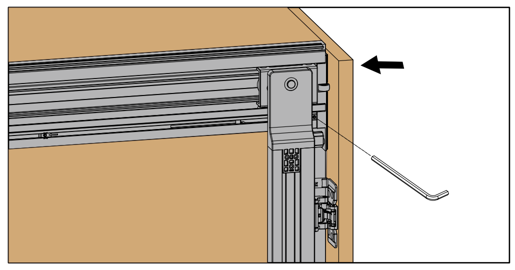
5.2 Align the cup with the mounting hole and secure with screws

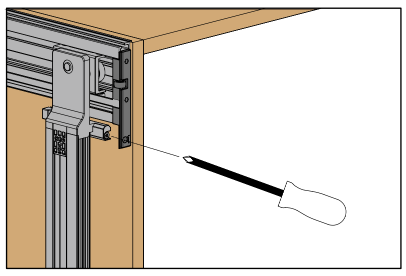


6 Door gap adjustment

6.1 With the buffer in a loose position, the door panel is pushed in and the buffer is pushed out, and the buffer is held in place with 2mm hex wrench

Same methods to fix the down damper



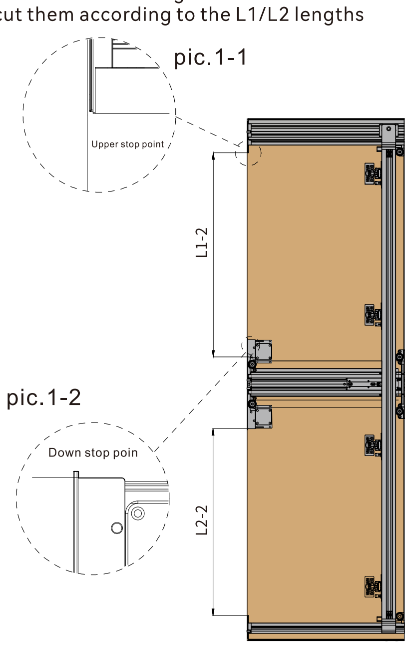


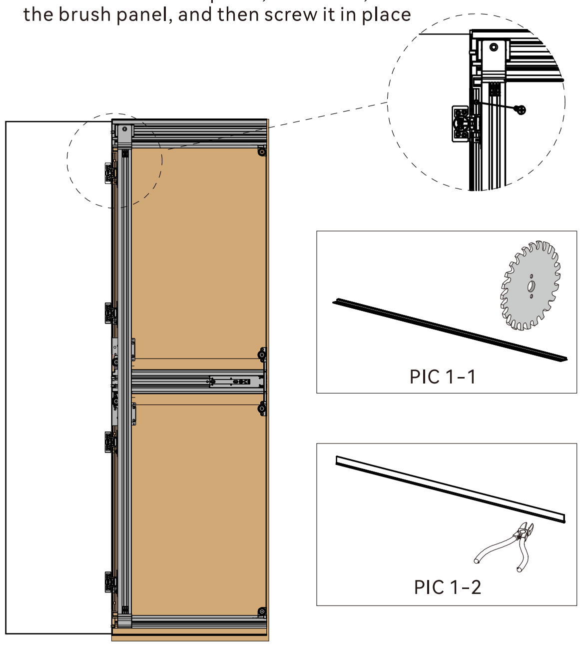
6.2Adjustment of wire tension and door level by means of holes in the upper and lower guides.

7 Installation of decorative brushes

7.1 Measure the length of the brushesand cut them according to the L1/L2 lengths

7.2 Pull out the door panel, aluminum, brush and the brush panel, and then screw it in place

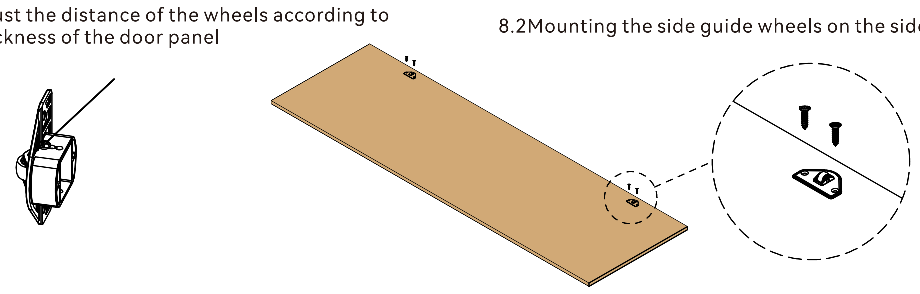




8 Installation of side guide wheels

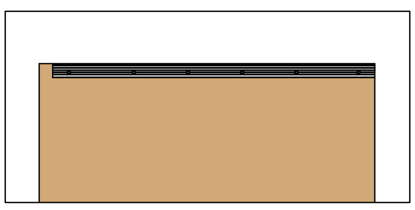
8.1Adjust the distance of the wheels according to the thickness of the door panel

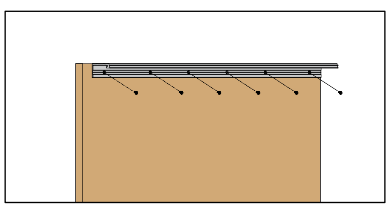
8.2Mounting the side guide wheels on the side panel



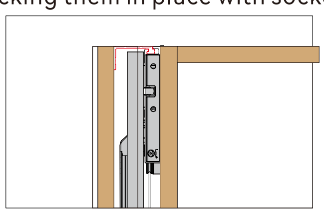
9 Installation of End panels

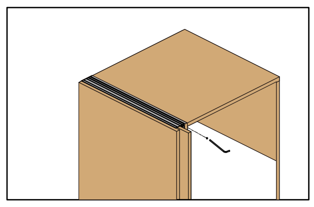
The side sealer rail Assembly is fixed by ST4*16 cross countersunk screw, the screw head should not protrude(symmetry operation)





9.2 Slide the end panels onto the top and bottom rails and flush with the edge of the cabinet, locking them in place with socket head cap screws at the front and back

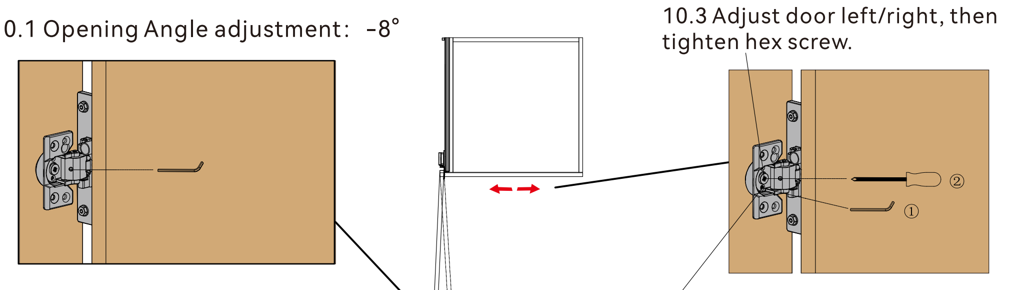




10 Door panel adjustment

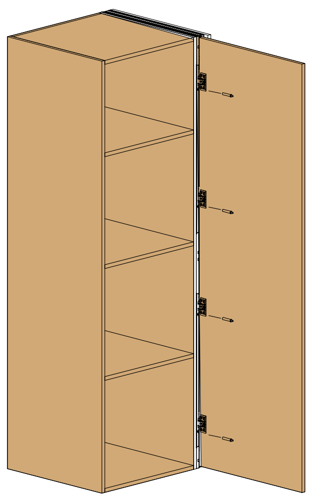
10.1 Opening Angle adjustment: -8°

10.3 Adjust door left/right, then tighten hex screw.

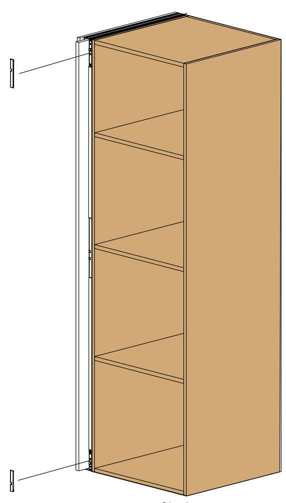


10.2 To adjust door, loosen hex screw first.

11 Installation of door stop buffer and cover



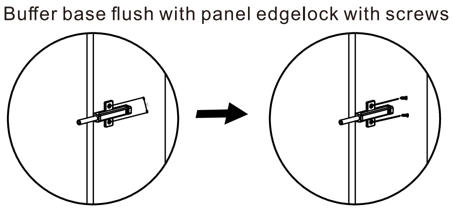
Install the door stop buffer



Install the cover

12 Installation of rebound buffer

Buffer base flush with panel edgelock with screws



13 Application scenario

With handle design

Without handle design
